Evidence-Based Forestry

Approaches and results in the Asia-Pacific region

The Evidence-Based Forestry initiative has been supporting the use of robust research synthesis methodologies to inform decision-making in forestry and landscapes management. Systematic maps and reviews examine 'what works' in assessing the effectiveness of different policy interventions.

Join us as we discuss lessons learned from 18 such maps and reviews, and present findings on the social and environmental impacts of national and sub-national forest policies in East and Southeast Asia.
