Fire and haze

Politics, economics and landscape transformation

In 2015, fires and haze cost Indonesia USD 16 billion and affected 43 million people in Indonesia and even more in Malaysia, the Philippines and Singapore.

A recurring phenomenon, fire and haze persist because many people benefit from using fire as a way to clear land for agriculture, including oil palm.

Join us to find long-term solutions to fire and haze as we ask:

- Who gains and who loses?
- What needs to happen now to prevent fire and haze in 2016?
- Can oil palm development be sustainable?
