Research agenda for forested landscapes in 2017–2022

Climate change, poverty and food insecurity.

Forests play a crucial role in confronting some of the most important challenges of our time.

The CGIAR Research Program on 'Forests, Trees and Agroforestry: Livelihoods, Landscapes and Governance' responds to the urgent need for a strong and sustained research focus on forest management and governance.

Join us as we share lessons learned from the program, and launch a new research agenda more closely aligned to the Sustainable Development Goals (SDGs).
